

# Child Participants Aged 5-18 Needed for MRI Imaging Research

The Paxinos Labs' 'Eight to Eighty' project aims to construct a living brain atlas using ultra-high resolution MRI imaging, which displays all ~1000 structures of the child's brain.

## Inclusion criteria for participants:

- Aged 5-18
- Healthy and have no existing psychiatric conditions or metal implants.
- No history of neurologic or psychiatric conditions.
- No history of claustrophobia.

**Those who do not meet the above criteria are excluded from participation.**

## Participation Involves:

4 onsite visits consisting of:

- 1 x 15-minute safety screening session (in your first scan session).
- 4 x <45-minute MRI scans while watching movie clips.

Participants will receive a \$30 voucher for each scanning session they attend (total \$120 for four sessions).
